

Arjun Mehta

Machine Learning Engineer

Bengaluru, India | +91 98765 43210 | arjun.mehta@example.com | linkedin.com/in/arjunmehta | github.com/arjunmehta

PROFESSIONAL SUMMARY

Machine Learning Engineer with 3 years of experience shipping Python services and LLM-powered features, from RAG pipelines and prompt engineering through Dockerised deployment on AWS.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

AI/ML: LLMs, prompt engineering, RAG pipelines, LangChain, scikit-learn, model evaluation, fine-tuning

Frameworks: FastAPI, Django, Flask, React

Data: PostgreSQL, MongoDB, pandas, NumPy, FAISS, vector database, data pipeline

Cloud & DevOps: Docker, AWS, Jenkins, CI/CD, MLOps, Git, Linux

PROFESSIONAL EXPERIENCE

Software Engineer | Cobalt Systems | Bengaluru, India *(July 2023 - Present)*

- Built and maintained Django REST services handling 40k daily requests for the logistics dashboard
- Designed PostgreSQL schemas and optimised slow SQL queries, cutting p95 latency by 35%
- Containerised three internal services with Docker and deployed them on AWS with Jenkins CI/CD pipelines
- Mentored two interns through their first production deployments

Junior Developer | Vireo Labs | Pune, India *(Aug 2022 - June 2023)*

- Developed internal reporting tools in Flask consumed by the operations team
- Wrote ETL jobs in Python that consolidated vendor data into a central warehouse

PROJECTS

Support Ticket Classifier | Personal project

Technologies: Python, scikit-learn, pandas, Flask, FastAPI, LLMs, FAISS, LangChain

- Built an LLM-based intent classifier that routes incoming support tickets into 12 categories with 87% accuracy, replacing a TF-IDF baseline
- Built a RAG pipeline that retrieves similar historical tickets from a FAISS vector database as few-shot context before classification
- Iterated prompt engineering against a held-out set of 40,000 tickets and served the model through a FastAPI inference endpoint
- Wrote an evaluation script comparing precision and recall across categories

Kirana Commerce | Personal project

Technologies: React, Django, PostgreSQL, Docker

- Built a full-stack storefront for neighbourhood grocery shops with cart, checkout and order tracking
- Deployed on a single VM with Docker Compose and nginx

Sensor Anomaly Dashboard | College capstone

Technologies: Python, pandas, Plotly, Flask

- Analysed 2 million IoT sensor readings and flagged anomalies with a rolling z-score
- Built a Plotly dashboard the lab used to review flagged intervals

EDUCATION

B.E. Computer Science | Pune Institute of Technology *(2018 - 2022)*

CGPA 8.4/10
